Claims.

1.   Information transfer system, comprising a receiver and a transmitter for transferring an information signal to the receiver _via_ a transfer medium, the information signal comprising main data and sub data, the sub data comprising coded text lines having a plurality of character codes, the receiver being provided with a character display unit for displaying characters defined by the character codes in the coded text lines, which display unit has a predetermined number of character display positions, characterized in that said predetermined number of character positions of the display unit is less than the number of character codes in the coded text lines, in that the coded text lines include control codes, the receiver being provided with display control means for controlling the display of characters corresponding to the character codes included in the coded text line in dependence on the said control codes.

2.   Information transfer system as claimed in claim 1, characterized in that the receiver is provided with means for storing received coded text lines into a memory, and in that the control codes comprises horizontal scrolling control codes, the display control means of the receiver being adapted to initiate in response to the horizontal control codes a horizontal scroll of the characters of the coded text line stored in the memory.

3.   Information transfer system as claimed in claim 2, characterized in that the receiver is provided with entry means for manually entering scroll commands, the display control means being adapted to control the scrolling in dependence on the entered scroll commands.

4.   Information transfer system as claimed in claim 2 or 3, characterized in that the display control means are adapted to scroll the characters with a speed dependent on the scrolling control codes or the entered scrolling commands.

5.   Information transfer system as claimed in any one of the preceding claims, characterized in that the control codes comprises marking codes for marking groups of characters, the display control means being provided with means for selecting the character codes for which corresponding characters are to be displayed on the basis of the marking
